- Managed and motivated 170 brands in this period, maximizing their indicators and making the store a stepping stone to their success.

# COVER LETTER

Dear recruiting team,

I'm interested in the position because I believe I can positively contribute to the team, being a graduate student in Information Systems in the 2nd semester, certified as a computer technician and experienced in technical support, maintaining electronic equipment, also programming websites / Front-End and development of mobile applications in React Native and Flutter; I believe that my skills are aligned with the company's vision and needs, so the opportunity to work together will allow me to improve my technical and personal skills with the efficiency desired by the institution.

Despite starting my career in development, I have always been connected to technology, for example, when I was in charge of the Do Meu Jeito Collaborative Store in Brasília, I was able to improve my digital knowledge acquired throughout my career by putting them into practice - I was responsible in the IT and Marketing areas of the company and performed with the team technical functions such as structuring the network, maintaining computers, printers and networks in addition to developing the store's website, its social networks and monitoring the development of many campaigns and content advertising.

From 2019 to early 2021 I was living in England, where I improved my assistant skills while working for a large company, Amazon Inc. The experiences I gained in Collaborative Store and Amazon contributed to my learning and improvement of processes and are the main reason for my career change.

I'm currently developing several autonomous projects from designing web-sites, e-commerce and android / ios applications integrated to the back-end using the most up-to-date and promising tools available on the market.

I am a professional with initiative, creativity, suitable for teamwork and I am looking for an opportunity to put my theoretical knowledge into practice, thus effectively contributing to your expected results. I am available for immediate start and I have availability to work remotely or sponsored visa for moving. I'm motivated to put my skills to collaborate with the company's success.

Thank you for your attention in analyzing my resume and I await further contact.
